V. Appendix - Raw Material Trend

- N/R** : SICOM TSR20 prices fell -11.4% QoQ due to concerns over a global economic recession and COVID-19 in China. Expectations for economic stimulus in China and concerns over a global recession are mixed, so 2023 1Q is expected to remain flat
- S/R** : Weak global demand and Butadiene's new supplier growth continue to drive prices down into 22 4Q. In Europe, butadiene prices fell gradually due to the warmer winter climate than expected. Global demand recovery and energy costs will affect the prices
- C/B** : CBO Index fell -16.0% in 2022 4Q due to the global economic downturn. Carbon black prices remain on the rise until the second quarter of '22 due to a continuous rise in international oil prices, falling crude oil supply, and rising demand for ship oil. However, carbon black prices were turned down due to the lockdown in China and the dollar's strength. Expectations for economic stimulus in China and concerns over a global recession are mixed, so 2023 1Q is expected to remain flat
